Here are some brief explanations of the basics of therapy and how it fits into our discussion of the unconscious mind. Therapy is a great benefit to the individual going through it as well as a benefit to society as a whole. It is important that people take advantage of this benefit. Inhibitory antiendotoxin properties of antibodies to S-layer protein of Clostridium difficile in monoclonal antibody-secreting hybridoma. The S-layer proteins (slpA) of Clostridium difficile were identified as surface

antigens. These proteins form a stable acidic outer protein layer on the cell envelope surface and serve as targets for the host defence. In this study, we found the inhibition of cytotoxic activity of anti-VH-mediated anti-slpA IgG against LPS of *C. difficile* in an ELISA assay. This inhibition was observed when slpA antigen was present at concentrations of the order of 1-10 ng/mL. In contrast, when the antibody was adsorbed with and cross-linked to the cells, the cytotoxic activity of the antibody was less than 50% compared to cells coated with pre-adsorbed antibody. IgG1 and IgG2a isotypes of the anti-slpA antibodies were equally inhibited in the same assay. The data suggest that neutralizing mechanisms of these antibodies are responsible for the antiendotoxic activity.Q:
